ECONOMIC SURVEY

1. FOREWORD

The Central Bank of Malta tightened its monetary policy stance further in May, raising the central intervention rate by another 25 basis points, to 4.25%. This decision was taken against a backdrop of narrowing interest rate differentials in favour of the lira and a downward trend in the external reserves. The Bank emphasised that, until the adoption of the euro on 1 January 2008, it remained committed to ensuring that domestic financial conditions were supportive of the central parity rate of MTL/EUR 0.4293 within ERM II.¹

Although the domestic three-month Treasury bill rate increased throughout the first half of 2007, the comparable euro area rate rose more rapidly. As a result, the premium on short-term Maltese lira assets was gradually eroded, so that in May it reached its lowest level since the entry of the lira into ERM II. The increase in the central intervention rate, however, contributed to a small recovery in the premium in June.

The Bank's net foreign assets continued on a downward trend, reflecting the impact of a number of factors, including the premature conversion of Maltese lira holdings into euro, the retention of euro-denominated earnings by exporters and lower receipts of EU funds.

Although a contraction in the net foreign assets of the banking system dampened monetary expansion, the annual rate of growth of broad money (M3) accelerated to over 7% in March. Time deposits recorded double-digit growth rates as savers switched out of more liquid deposits

and cash holdings in response to higher interest rates. Currency in circulation thus continued to decline, pulling narrow money (M1) down by almost 2% year-on-year as at March. These monetary patterns became more accentuated in more recent months.

Monetary growth during the first quarter of 2007 was driven by an increase in domestic credit, which, in turn, continued to be fuelled by additional lending to households for house purchases and to the real estate, renting & business activities sector. In contrast, outstanding net claims on central government remained below those reported a year earlier.

In real terms the economy grew at an annual rate of 3.5% in the first quarter of 2007. This represents a moderate acceleration compared with the second half of 2006. Growth was underpinned by favourable developments in the external sector, as exports rose while imports declined. Although it expanded at a slower rate, consumption also had a positive impact on growth. In contrast, gross fixed capital formation declined.

The unemployment rate, as estimated in the LFS, remained below 7% during the quarter, virtually unchanged since the second half of 2006 but lower than a year earlier. As regards job creation, additional private sector jobs more than offset the downsizing of the public sector, in line with recent trends. Part-time positions continued to increase, but full-time employment accounted for around two-thirds of the new jobs created.

The easing of price pressures continued as the HICP twelve-month moving average inflation rate fell to 2.2% by March. This represented a full

¹ On 10 July 2007 the ECOFIN Council decided to allow Malta to adopt the euro as its currency as from 1 January 2008 and set the permanent conversion rate for the Maltese lira at MTL/EUR 0.4293.

percentage point drop from the previous peak, reached in September 2006. The improved price performance was attributable to the unwinding of the impact of earlier increases in energy prices, downward pressure from accommodation prices and generally low inflation in the other HICP components.

In the first quarter of 2007 the deficit on the current account of the balance of payments narrowed on a year earlier. A smaller merchandise trade gap outweighed lower surpluses on services and current transfers as well as a wider deficit on factor incomes. However, net inflows on the capital and financial account also declined, partly as a result of a drop in receipts of EU

funds. Against this backdrop, reserve assets continued to fall.

A lower general government deficit was also reported during the quarter under review. The fiscal outcome was largely driven by strong growth in tax revenues in conjunction with a drop in outlays on gross fixed capital formation.

According to the Bank's new business survey, which focuses primarily on developments in the services sector, second-quarter turnover and profits were higher than in the first quarter. These patterns are expected to continue into the third quarter, as firms are anticipating further increases in both turnover and profits.

2. THE INTERNATIONAL ENVIRONMENT

The world economy

In the first quarter of 2007 the global economy continued to grow robustly, with the euro area economy, though easing slightly, outperforming those of Japan and the United States. Among emerging countries, China and India maintained their position as fast growing economies, registering growth rates of 11.1% and 9.1%, respectively.

Inflationary pressures remained linked primarily to changes in energy prices. Thus, with oil prices rising over the quarter, consumer price inflation in the main industrial countries generally accelerated. In addition, relatively strong growth in demand heightened inflationary risks, with major central banks tightening the stance of monetary policy in response. Meanwhile, further increases in oil prices and the problem of global imbalances, as evidenced by the large current account deficit in the United States, continue to be the factors posing downside risks to the world economy.

Economic and monetary developments in the major economies

Real GDP growth in the United States slowed down to an annual rate of 1.9% in the March quarter, from 3.1% in the previous three months (see Table 2.1). The deceleration reflected the continued reduction in residential investment and a drop in export growth. Despite the slower growth, the average inflation rate rose to 2.4% in the first quarter from 1.9% in the preceding three-month period, mostly as a result of higher food and energy prices (see Table 2.2). Meanwhile, the unemployment rate remained unchanged from the previous quarter at 4.5%.

¹ Forecasts.*Sources: Consensus Forecasts; Eurostat; US Bureau of Labor Statistics; Bank of Japan.*

The Federal Reserve left the federal funds rate target unchanged at 5.25% in the first quarter of 2007, as inflation pressures seemed likely to moderate over time, though it voiced concerns about risks to inflation (see Chart 2.1). It continued to pursue an unchanged policy stance going into the second quarter.

Slower growth in exports and in household consumption dampened economic expansion in the euro area during the quarter, with annual GDP growth easing from 3.3% in the December quarter to 3.0%. Growth in the euro area, however, remained relatively robust, exceeding that in the United States and Japan. Annual inflation, at 1.8%, was stable. Labour market conditions tightened, with the unemployment rate falling further to 7.3% from 7.6% in the fourth quarter of 2006.

To counter inflationary risks associated with strong domestic demand and vigorous money and credit growth, the ECB raised the minimum bid rate on its main refinancing operations by a quarter of a percentage point to 3.75% in March. The minimum bid rate was lifted again in June, to 4.00%.

Real GDP growth in the UK edged down to 2.9% in the first quarter of 2007, compared with 3.0% in the final quarter of 2006. Investment emerged once more as the main contributor to growth, though consumption expenditure also impacted positively. Inflationary pressures remained sustained, with the annual CPI rate accelerating to 3.1% in March. The jobless rate stood at 5.5% in the March quarter, unchanged over the preceding quarter, but up by 0.3 percentage points on a year earlier.

After lifting its official interest rate by 0.25 percentage points to 5.25% in January, the Bank of England kept rates on hold for the rest of the first quarter. In May, however, against a backdrop of high inflationary pressures, the rate was raised to 5.50%.

The Japanese economy expanded at an annual rate of 2.7% in the period between January and March, as against 2.4% in the final quarter of 2006. The expansion was driven by robust exports and higher domestic demand. Nevertheless, consumer price inflation turned negative in February, with consumer prices falling by 0.1% during the quarter when compared to the

corresponding quarter of 2006. On the labour front, the unemployment rate decreased marginally to 4.0% during the quarter.

Despite the absence of inflationary pressures, the Bank of Japan raised its official basic discount rate from 0.40% to 0.75% in February, citing prospects of an improving economic situation. The Bank kept rates on hold for the rest of the first quarter and into the second.

Foreign exchange markets

After weakening throughout 2006, the US dollar partially recovered in January, appreciating against the euro and the pound sterling (see Chart 2.2 and Table 2.3). The strengthening of the dollar was influenced by reduced market expectations that the Federal Reserve would ease its monetary policy stance and by lower energy prices. During the rest of the quarter, the dollar continued to

appreciate against sterling but resumed its downward trend vis-à-vis the euro on concerns about the US economy, and the situation in the sub-prime mortgage market in particular. Hence, over the quarter as a whole, the US dollar fell by 1.0% vis-à-vis the euro, while it appreciated by 0.3% against sterling.

In January and early February, the dollar continued to gain against the Japanese yen on heightened perceptions that no official action would be taken against the yen's weakness. Subsequently, however, the Japanese currency reversed course as investors' appetite for risk declined. This led to the unwinding of carry trades in which investors borrow in low-yielding currencies, such as the yen, and then sell those currencies to invest in higher-yielding assets. Thus, against the yen, the dollar ended the first quarter 0.5% below the end-December level.

The euro strengthened against the other major currencies during the March quarter (see Chart 2.3). Apart from gaining ground on the dollar, the euro appreciated by 1.4% vis-à-vis the pound sterling. Movements in the sterling/euro rate were characterised by the impact on market sentiment of weaker-than-expected UK economic data, which had a negative effect on the pound, and by the widening interest rate differential in favour of sterling, which had a positive effect. The euro also strengthened against the Japanese yen, gaining 0.5%.

In April the dollar generally continued to fall in terms of the euro and sterling. In May, however, it reversed course against sterling but remained broadly unchanged vis-à-vis the euro. In terms of

the yen the dollar strengthened over the two-month period. In April the euro fluctuated within a narrow range against the pound sterling, before recovering in May. The appreciation of the euro against the Japanese unit continued in April and May.

Commodities

Oil

Oil prices declined sharply at the start of the year, with the price of Brent crude falling to a low of USD49.00 per barrel in mid-January. This drop was driven by mild weather in the US, which lowered demand. However, oil prices rose rapidly thereafter on account of colder weather, lower OPEC supply and increased geopolitical tensions (see Chart 2.4). Thus, at the end of March, the price of Brent crude was USD69.02 per barrel, 18.0% higher than its end-December level. Going into the second quarter, oil prices were volatile, but nevertheless remained above their end-March levels.

Gold

Gold started the year on a weak note but soon resumed its general upward trend as a result of rebounding oil prices and hedge fund buying (see

Chart 2.5). The rally continued for most of February as a weak US dollar and growing tensions in Iran prompted investors to buy the

precious metal for its safe haven attributes. The price of bullion fluctuated during the rest of the quarter, ending March at USD663.1 per ounce, or 4.2% higher than the level registered at the end of December. In April gold prices extended their gains, before losing ground in the following month.

Other commodities

Non-energy commodity prices as measured by the Reuters Commodity Index¹ extended their upward trend in the first quarter of 2007, aided by increases in the prices of raw materials and food, particularly grains. Thus, the index added 3.2% over the quarter (see Chart 2.5). In the second quarter, non-energy commodity prices rose further.

¹ The Reuters Commodity Index is a weighted index of the prices of seventeen commodities that include food, beverages, vegetable oils, agricultural raw materials and metals, but exclude gold.

3. MONETARY AND FINANCIAL DEVELOPMENTS

The Central Bank of Malta tightened its monetary policy stance during the first quarter of 2007, raising the central intervention rate by 25 basis points to 4.00% in January. The Bank increased the central intervention rate by a further quarter of a percentage point in May 2007, bringing it to 4.25%.

In line with movements in official rates, money market rates also rose during the first quarter. In the capital market, government bond yields increased, while equity prices extended their gradual downward trend.

During the March quarter, broad money continued to expand at a steady pace, driven by an increase in domestic credit, although a contraction in the net foreign assets of the banking system dampened monetary expansion. The issue of debt securities by one bank, which was reflected in an increase in the other counterparts of M3, was another factor restraining monetary growth during the quarter.

The monetary base

The monetary base (M0) contracted by Lm19.9 million, or 2.9%, during the first quarter of 2007, wiping out more than half of the previous quarter's increase. While currency in issue fell by Lm29.0 million, bank deposits with the Central Bank of Malta rose by Lm9.1 million during the

¹Excluding term deposits, which are shown with other liabilities.

period (see Table 3.1).¹

The contraction in M0 during the first three months of 2007 reflected mainly a decline in the Bank's foreign assets, coupled with a rise in other liabilities, the latter attributable to an increase in outstanding term deposits. At the same time, however, a fall in government deposits with the Bank, which impacts positively on bank deposits and currency in circulation, restrained the decline in the monetary base.

Monetary aggregates

Broad money expanded by Lm67.9 million, or 2.1%, during the first quarter of 2007 (see Table 3.2). With higher interest rates resulting in an increased demand for bank deposits, the annual rate of growth of M3 extended the upward trend evident throughout 2006, reaching 7.2% in March (see Chart 3.1).

Narrow money (M1) contracted significantly during the quarter, falling by Lm30.9 million, or 1.9%, mostly on account of a drop in currency in circulation. The latter fell by Lm25.0 million, or 5.2%, reflecting the increasing opportunity cost of holding cash in an environment of rising interest rates as well as a reduction of Maltese lira

¹ Since the amount of marketable instruments issued by the MFI sector is negligible, at present M2 is equal to M3.

¹ M0 is a measure of the Central Bank of Malta's monetary liabilities and consists of currency in issue and bank deposits with the Bank, excluding term deposits.

cash holdings in anticipation of the euro changeover. At the same time, deposits withdrawable on demand declined by 0.5%, mainly on account of a contraction in foreign currency holdings belonging to households. Consequently, the annual growth rate of M1 persisted on its downward trend, falling to -1.7% in March, with currency in circulation contracting by 7.4% on a year earlier (see Chart 3.1).

During the quarter under review, intermediate money (M2) expanded by Lm67.9 million, or 2.1%, as the contraction in M1 was outweighed by a substantial rise in deposits with an agreed maturity of up to two years. The latter built upon the robust increases seen in the previous two quarters, adding 6.6%, fuelled primarily by growth in Maltese lira denominated deposits belonging to households. Balances belonging to non-financial companies and insurance companies also increased significantly during the quarter. Growth in term deposits partly reflected depositors' responses to rising interest rates, though greater competition for funds by banks, as witnessed by the launch of new deposit products, also contributed. As a result, deposits with an agreed maturity of up to two years grew at a much faster pace on a year-on-year basis than in previous quarters, climbing by 18.3%, from 12.8% three months earlier. Foreign currency denominated deposits in M2 increased by Lm15.3 million during the quarter.

During the March quarter, banks adjusted their deposit and lending rates in response to the increase in the central intervention rate in January (see Chart 3.2). While lending rates reacted immediately, rising by 20 basis points between end-December and end-January, deposit rates adjusted gradually over the quarter, as higher rates were applied only to new deposits. Overall, the weighted average lending rate increased by 21 basis points during the quarter, ending March at 6.11%. At the same time, the weighted average interest rate on Maltese lira deposits rose by 25

basis points to 2.62%. Average interest rates on demand, savings and time deposits, all increased during the quarter, ending March at 0.69%, 1.41%, and 3.51%, respectively.

Going into the following quarter, the annual growth rate of M1 decelerated further, reaching -4.0% in May as the downward trend in currency in circulation continued. At the same time, growth in M3 also slowed down on a year-on-year basis, falling to 6.9%. Additionally, both the weighted average deposit rate and the corresponding lending rate increased, rising to 2.68% and 6.13%, respectively, in May.

Counterparts of monetary expansion

An increase in domestic credit drove monetary expansion during the first three months of 2007. In contrast, a decline in the net foreign assets of the banking system and the issue of debt securities by one bank on the primary market, which boosted the other counterparts of M3, had a dampening effect on monetary growth.

Domestic credit expanded by Lm139.1 million, or 4.8%, during the March quarter as net claims on central government and claims on other residents both increased significantly (see Table 3.3). As a result, the annual rate of domestic credit growth

accelerated to 10.4% in March from 9.2% in December (see Chart 3.3).

Net claims on central government increased for the second quarter in a row, adding Lm70.9 million, or 19.4%, during the first three months of 2007. This stemmed mainly from a drop in government deposits with the Central Bank of Malta, though an increase in the amount of Treasury bills held by the rest of the banking system also contributed. Consequently, the year-on-year growth rate of net claims on central government observed throughout most of 2005 and 2006 continued to recover, rising from -17.6% in December to -2.7% in March.

Claims on other residents increased by Lm68.2 million, or 2.7%, during the quarter. Augmented by the half-yearly debiting of accrued interest to

borrowers' loan accounts in March, loans and advances rose by Lm69.0 million, or 2.8%, with demand for credit stemming entirely from the non-bank private sector (Table 3.4). The latter expanded by Lm71.5 million, or 3.1%, driven

¹ Claims on other residents consist mainly of loans and advances and holdings of securities, including equities, issued by the non-bank private sector and public non-financial companies. Interbank claims are excluded.

² In Malta, this refers to the local councils.

³ Includes mining & quarrying, public administration, education, health & social work, community recreation & personal activities, extra-territorial organisations & bodies and non-bank financial institutions.

mainly by further lending to households – mostly to finance house purchases – and to the ‘real estate, renting & business activities’ sector – largely for property development. Lending to the construction sector and the wholesale & retail trade sector also rose substantially. On an annual basis, however, growth in claims on other residents slowed down slightly, falling to 12.9% in March from 14.6% three months earlier.

The net foreign assets of the banking system contracted for the second consecutive quarter,

shedding Lm13.5 million, or 0.7%, during the quarter under review. A significant decline in the net foreign assets of the Central Bank of Malta was only partly offset by an increase in those of the rest of the banking system. Nonetheless, on a year-on-year basis, the banking system’s net foreign assets were up by 16.0% in March, compared with an increase of 14.0% in December (see Chart 3.4).

The net foreign assets of the Central Bank of Malta dropped by Lm56.4 million, or 5.9%, during

the first three months of 2007, mainly as a result of substantial net foreign exchange sales to the rest of the banking system. Demand for foreign exchange was influenced by seasonal factors, but the conversion of domestic currency holdings into euro in anticipation of euro adoption also had an impact. However, due to an even bigger contraction in the Bank's holdings during the first quarter of 2006, the annual rate of growth of the Bank's net foreign assets picked up slightly, rising to 2.6% in March from 2.0% three months earlier.

At the same time, the net foreign assets of the rest of the banking system rose by Lm42.9 million, or 3.9%, with their year-on-year growth rate reaching 29.1% in March from 26.8% in December. This increase was mainly attributable to foreign exchange purchases from the Central Bank of Malta and an inflow of equity capital into one foreign-owned bank. An increase in revaluation reserves boosted the net holdings of the banking system further.

The other counterparts of M3 increased by Lm57.7 million, or 3.3%, during the March quarter reflecting an increase in capital and reserves, a drop in accrued interest and a rise in debt securities issued by the banking system. The expansion in the banks' capital and reserves and the drop in accrued interest were reflected in

increases in the net foreign assets and in domestic credit, respectively. Thus, unlike the issue of debt securities, which dampened growth in M3, they had no impact on monetary aggregates.

Going into the second quarter of 2007, domestic credit increased further, with its annual growth rate reaching 11.8% in May. In contrast, the annual growth rate of the net foreign assets of the banking system decelerated significantly, falling to 4.0% in May, as a sizeable share capital inflow into one bank and the privatisation of Maltacom plc, which had taken place in the second quarter of 2006, no longer had an impact.

The money market

Excess liquidity in the banking system during the first quarter of 2007 was slightly lower than in the previous two quarters. As a result, the amount of funds absorbed by the Bank through 7-day term deposit auctions declined, with the average weekly level falling to Lm125.8 million, from Lm135.9 million in the last three months of 2006. Following the rise in the central intervention rate in January, the interest rate floor on these deposits was increased from 3.70% to 3.95%.

Turnover in the interbank market continued to decline during the first quarter of 2007, as banks

once again used the averaging mechanism of the reserve deposit requirement to manage their liquidity positions. The value of transactions dipped to Lm5.2 million from Lm35.7 million in the preceding quarter. All interbank loans had a 1-day term to maturity, with more than four-fifths of them involving the same bank. The interest rate on one-week interbank loans increased during the quarter, following the rise in the central intervention rate, reaching 4.05% in March, from 3.78% three months earlier (see Chart 3.5).²

The Treasury made greater use of short-term financing during the first quarter of 2007, issuing Lm111.4 million worth of bills as opposed to Lm97.6 million in the previous quarter. Three-month bills accounted for almost three-fourths of the total issued, with the rest consisting mainly of nine-month bills. Banks acquired around 80% of the bills issued during the quarter, while insurance companies took up most of the remainder. Mirroring the increase in official rates in January, the yield on the three-month bill rose by 27 basis points from the end-December level to 4.18% in March.

Turnover in the secondary market for Treasury bills increased to Lm23.1 million in the quarter under review, from Lm10.3 million in the last three months of 2006. Transactions involving the Bank amounted to Lm11.1 million, with purchases totalling Lm9.4 million. In line with primary market developments, secondary market rates increased during the period, with the yield on the three-month bill rising from 3.91% as at end-December to 4.18% three months later.

The three-month premium on the Maltese lira over the euro narrowed from 49 basis points in December to 37 basis points at end-March, as the moderate rise in the three-month Treasury bill rate was outpaced by an increase in the corresponding euro rate (see Chart 3.5).^{3,4}

In the second quarter, following another rise in official rates, primary and secondary market three-month Treasury bill yields rose once again, reaching 4.23% and 4.27%, respectively, in May. But an even greater rise in the three-month euro rate led to a further narrowing in the interest rate premium on the lira, which reached 30 basis points by end-May.

The capital market

Issuance activity in the primary bond market during the first three months of 2007 was, for the second quarter in a row, driven by the corporate sector. In February, one bank issued a total of

² As no interbank deals in this maturity took place in the first three months of 2007, the official fixing rate was used instead.

³ The foreign interest rate shown in Chart 3.5 is computed as a basket-weighted average of the relevant interest rates on the euro, the pound sterling and the US dollar until April 2005. The secondary market rate on three-month euro area government securities is shown thereafter.

⁴ Up to March 2007 secondary market yields are calculated on the basis of remaining days to maturity divided by 365 days, while from April 2007 yields are calculated on the basis of remaining days to maturity divided by 360 days.

4. OUTPUT, EMPLOYMENT AND PRICES

During the first quarter of 2007, the Maltese economy grew by 3.5% in real terms, driven by higher net exports and consumption. Over the same period, RPI inflation trended downwards to 2.4% in March, a full percentage point below the peak attained last September and reflecting the unwinding of the base effect related to earlier increases in utility and fuel prices. In the labour market, LFS data for the first quarter of 2007 show that the unemployment rate dropped to 6.8%, one percentage point below that recorded a year earlier.

Gross Domestic Product

The economy grew at a moderately faster pace in the first quarter than in the previous two quarters (see Chart 4.1). Higher net foreign demand was the main contributor to growth, since domestic

demand contracted on a year earlier. Growth in the former was, in turn, explained mainly by a fall in imports although exports registered positive growth (see Table 4.1).

The primary contributor to the reduction in domestic demand was gross fixed capital formation, which declined by 11.7% from year ago levels. It provided a negative contribution of 2.9

Table 4.1

Source: NSO.

percentage points to the overall rate of economic growth. The fall in investment was observed in both the private and the public sectors. In the private sector, this was reflected in a drop in the acquisition of machinery, though this was partly offset by higher construction activity. Domestic demand was also negatively affected by a reduction in inventories, which reduced aggregate growth by 2.6 percentage points.

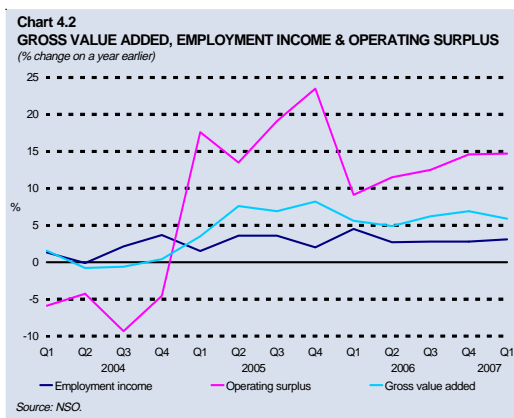

On the other hand, private consumption contributed a percentage point to first quarter GDP growth. However, the annual rate of consumption growth decelerated to 1.5% from 2.6% in the same period of 2006. Similarly, government consumption expanded at a slower pace, 2.3% compared with 3.0% a year earlier, and contributed 0.5 points to overall growth.

With exports registering a marginal increase of 0.4% and imports declining by 6.9%, the contribution of net external demand to GDP growth during the quarter was a significant 7.5 percentage points. The measurement of foreign trade aggregates in real terms continued to be influenced by volatility in the trade deflators.

The GDP deflator increased by 2.5% on a year-on-year basis during the first quarter of 2007, as against 3.3% posted a year earlier. The slowdown mirrored developments in the prices of consumption and investment goods. At the same time, the terms of trade improved, with export and import prices advancing by 9.7% and 5.6%, respectively.

Generation of income

Gross value added, which is equivalent to nominal GDP less net taxes on production and imports, rose by 5.9% during the first quarter, driven mainly by a sharp rise in operating surplus and contributing 5.1 percentage points to nominal GDP growth. Employment income, the other component of gross value added, grew at roughly

the same rate of previous quarters (see Chart 4.2). The largest contributions in value added came from real estate, renting & business activities, manufacturing, financial intermediation and other community, social & personal service activities. In contrast, construction and agriculture contributed negatively to the year-on-year growth in value added.

Operating surplus rose by 14.7% year-on-year and added 3.8 percentage points to nominal GDP growth of 6.0%. The operating surplus of the other community, social & personal service activities sector rose by almost a half and contributed 1.6 percentage points to the nominal increase in output, in part reflecting the strong performance of the gaming industry. Business profits recovered also in the manufacturing, financial intermediation and real estate sectors, which together made a combined contribution of 2.3 percentage points to total growth. For the fourth consecutive quarter, the electricity, gas & water supply sector contributed positively to nominal GDP growth. In contrast, the operating surplus in the construction, wholesale & retail trades and hotels & restaurants sectors fell (see Table 4.2).

Compensation to employees grew at a moderate pace during the first quarter of 2007. It increased

by 3.1%, marginally faster than in the previous quarter but slower than the 4.5% recorded in the same quarter of 2006. The largest contributors were real estate, renting & business activities and public administration, each of which contributed 0.3 percentage points to nominal GDP expansion.

Gross National Income

Gross National Income, which is measured in nominal terms, and is equivalent to the GDP plus net compensation and property income received

from abroad, went up by 6.0%, the same growth rate as nominal GDP (see Table 4.1).

Manufacturing

Based on a sample survey of manufacturing enterprises conducted by the NSO, the turnover of the manufacturing sector increased at a relatively slow pace in the first quarter of 2007, mainly due to a contraction in the sales of the radio, TV and communication equipment sub-sector (see Table 4.3). Consequently, the year-

Source: NSO.

on-year rise in export sales of Lm11.3 million was sharply lower than in the first quarter of 2006, while the increase in local sales was higher.

Following several quarters of double-digit growth, export sales of the radio, TV & communication equipment sub-sector, which mainly reflect the activity of the electronics

industry, declined by Lm2.5 million, or 2.1%, in the first quarter. This drop was offset by a relatively strong improvement, of Lm5.1 million, in the export performance of the printing & publishing sub-sector. Similarly, the first-quarter rise in exports of electrical machinery was a turnaround from the reductions observed in the previous quarters. Growth was also recorded in

foreign sales of the expanding pharmaceuticals sub-sector, although at lower levels than in recent quarters, and of jewellery & related articles. On the other hand, lower export sales were recorded by the clothing, textiles & leather sub-sector, reflecting the intense external competition being faced by labour intensive firms operating in the clothing industry.

Following three successive quarterly drops, there was a recovery in local sales, which were up by Lm1.9 million, or 4.7%. The food & beverages sub-sector and, to a lesser degree, that of printing & publishing, were the main contributors to the increase.

Employment in the sampled enterprises contracted further during the quarter compared to a year earlier, though the declining pattern of job losses across the manufacturing sector as a whole suggests that the downsizing of several areas of industry had levelled off by March. Layoffs were reported in the food & beverages, clothing & leather and medical & precision equipment sub-sectors. However, these were partly compensated for by additional recruitment in other sectors, including electrical machinery and radio, TV & telecommunications, for a net reduction of 97, or 0.5%, in the surveyed firms. Latest indications are that more job shedding lies ahead, particularly in the clothing sub-sector.

This notwithstanding, the annual gross wage bill of the sampled enterprises was up by 2.0% during the first quarter. As a result, wages per employee increased by 2.5%, a slower pace than the 4.4% reported in the December quarter and the 5.9% of the first quarter of 2006.

The survey shows that investment in the sampled

firms increased by Lm3.1 million, or 17.4%, from the year-ago level in the first quarter. The printing & publishing and food & beverages sub-sectors were the main contributors to the rise.

Tourism

The positive trend observed in tourism since the introduction of low-cost carriers in November persisted into the first quarter of 2007, when the number of tourists departing by air and sea rose by 7.0% on a year-on-year basis.¹ An increased number of visitors from Italy, and, to a lesser extent, from the UK, compensated for a decline in French and German tourists (see Table 4.4). Double-digit growth was also posted in other source markets, including Ireland and the Scandinavian countries.

Tourist expenditure rose by 9.9% from its year-ago level as higher non-package expenditure more than made up for the contraction in spending by tourists on package holidays. There was also a significant rise in the other components of tourist spending.

During the period under review, nights stayed declined by 3.5% when compared to the same period a year earlier. Indeed, the average length of stay contracted by one night to 8.7 nights, reflecting the changing trend whereby tourists are increasingly taking more frequent holidays but of a shorter duration. Length of stay declined across all accommodation types, with the sharpest drop occurring in the private accommodation segment.

Overall hotel occupancy rates rose by 4 percentage points to 39.8% during the first quarter of 2007. This resulted from a combination of a reduced bed stock and the rising number of

¹ As of January 2007, the NSO compiles tourism indicators covering visitors arriving by both air and sea. The figure for tourists arriving by sea does not include cruise passengers.

tourist arrivals. Among hotel categories, the highest increase in the occupancy rate, of 6.7 points, was recorded in 4-star hotels, while the 5-star category recorded a 3.3 percentage-point increase. In contrast, 3-star hotels recorded a 1.2 percentage-point drop in occupancy, as demand continued to shift away from lower categories of accommodation. The ‘other’ accommodation types also registered positive results, with their occupancy rates rising by 10.4 percentage points to 35.5% (see Chart 4.3).

Industry surveys reported overall hotel occupancy rates at 54.7% during the first quarter, up 4.5 percentage points from the same quarter of 2006. Occupancy rates were higher for the 5-star and 4-star hotel categories but remained almost unchanged in the 3-star segment.²

Average achieved room rates, which represent accommodation revenue per room net of VAT, increased in both the 3-star and the 4-star

² Malta Hotels and Restaurant Association Survey, June 2007.

categories but declined in the 5-star hotel segment. The latter development can in part be attributed to the shift in business mix, particularly a 25.1% drop in the conferences and incentive travel business.

Cruise liner activity rose at a moderate pace, with a year-on-year rise of 2.0% during the first quarter of 2007. Both EU and non-EU markets contributed to growth, with the latter expanding by 5.5%.

The latest data indicate that the positive trend in the tourist industry experienced since December 2006 continued into April, when further growth was registered in tourist numbers, nights spent and tourist expenditure.

Labour

Labour Force Survey

According to the LFS, the labour supply expanded by 0.4% over a year earlier in the first quarter of 2007. Unemployed persons declined by 1,669, or 13.0%, year-on-year, while the number of employed persons increased by 2,310, or 1.5% (see Table 4.5). Consequently, the unemployment rate dropped to 6.8%, a full percentage point below that recorded a year earlier, though it remained stable compared to the previous two quarters.

The rise in employment mainly reflected new full-time jobs, which increased by 1,349.

Table 4.5

Source: NSO.

Full-timers on reduced hours and part-timers made up the remainder. In the first quarter of 2007, the LFS estimated an increase of 946 in employment, of which 723 were employed full time.

Over the year to March 2007 the growth in jobs occurred entirely in the private sector, which reported an increase of 4,792, or 4.6%. Meanwhile, the public sector registered a decline

Source: NSO, from data provided by the ETC.

of 2,482, or 5.2%.

At 55.1%, the employment rate was 0.7 percentage points higher than a year earlier, while the activity rate was almost unchanged.³ A division of each of the two ratios into male and female cohorts shows increases in activity and employment among women and slight declines among men.

The survey also shows that the average gross annual salary increased by 2.4% over a year earlier, fuelled mostly by higher salaries in the financial intermediation sector.⁴

Administrative records

According to administrative records maintained by the ETC, the gainfully occupied population expanded at an annual rate of 0.6% in December 2006. At the same time, the unemployed

population fell by 3.0%, resulting in a 0.2 percentage point drop in the unemployment rate. Over the same period, there was also an increase of 8.6% in part-time employment (see Chart 4.4 and Table 4.6).

More recent data on the number of unemployed persons show a downward trend during the first five months of 2007, to a low of 6,580 in May (see Chart 4.5).

The ETC's administrative records confirm the results of the LFS, which point towards a continued shift in employment from the public to the private sectors. The ETC's figures show that in December private sector employment expanded by 3,017, or 3.3%, on a year earlier, while public sector employment contracted by 2,143, or 4.8%, in part reflecting the transfer of Maltacom plc, a telecommunications company, from public to

⁴ *Labour Force Statistics*, NSO Press Release 111/2007, 2 July 2007.

private ownership. Within the private sector, employment growth was accounted for entirely by the services sector.

Consumer prices

Retail Price Index

Measured on an annual basis, the RPI-based inflation rate averaged 0.9% during the first quarter of 2007 (see Table 4.7). Meanwhile, the 12-month moving average measure extended its downward trend, so that by March it had declined to 2.4%, a full percentage point below the peak attained last September.

Most of the components of the Index registered lower growth rates than in the previous quarter, reflecting the broad-based nature of the disinflationary process. Nevertheless, the main driver of the continuing deceleration was a base effect reflecting the unwinding of earlier increases in utility and fuel prices. In March the water, electricity, gas & fuels sub-index was 12.0% below the year-earlier level, in contrast to the situation prior to November when it had exhibited double-

digit growth rates. Similarly, the transport & communications sub-index benefited from the energy price effect and experienced an annual average decline of 0.6% during the first quarter, as lower air fares also contributed. Lower prices for clothing & footwear, in line with the pattern noted since last September, further dampened inflation (see Chart 4.6).

Movements in food, housing and house-related prices offset these benign developments to some extent. Food prices (including those for beverages & tobacco) continued to rise during the first quarter, although the contribution of this sub-index declined to 0.6 percentage points from 0.8 points in the previous quarter. Housing costs continued to increase faster than the overall RPI, and together with the sub-index measuring household equipment & house maintenance costs contributed an average 0.4 percentage points to inflation during the quarter.

At 1.6% in March, the core inflation rate, as estimated by the Central Bank of Malta, was virtually unchanged from the previous quarter.⁵

⁵ The core inflation measure includes only the RPI components labelled 4, 6, 8, 9 and 10 in Table 4.7, and is currently not influenced by changes in energy-related or clothing & footwear prices.

The absence of major pressures on prices was evident also in recently-published data for April and May. These showed the year-on-year inflation rate turning negative, and causing the 12-month moving average rate to decline further to 1.7% in May.

Harmonised Index of Consumer Prices

Developments in the HICP were similar to those indicated earlier for the RPI. The 12-month moving average inflation rate continued its deceleration from a peak of 3.2% in September 2006 to 2.2% by March, as the annual inflation rates hovered around 0.8% during the first quarter of 2007 (see Chart 4.7). As in the case of the RPI, the unwinding of energy prices exerted a decisive impact. However, price movements in the other HICP components were small, with the main downside pressure stemming from a decline in the prices of accommodation services, which dropped by around 1.1% after having been stable during the previous quarter.

More recent data underscore these trends, with the year-on-year movement in the HICP index turning negative in April and May. Thus, the downward trend in the 12-month moving average inflation rate extended to 1.4% in May.

Residential property prices

During the March quarter advertised house prices advanced by 3.1% on a year earlier, up from 1.0% in the previous quarter but slower than the 4.1% rise recorded in the same quarter of last year (see Chart 4.8).

This moderate pick-up in house price inflation reflected faster growth in asking prices for flats, both finished and in shell form, which together account for more than half of the surveyed properties. At the same time, prices of maisonettes in shell form continued to rise strongly, by 8.7%. Furthermore, the price decline over the previous two quarters for houses of character was mostly reversed, with prices of such properties rising by 11.4% during the year to March. In contrast, the annual increases in prices for terraced houses and town houses moderated to 2.1% and 3.2%, respectively.

For the second consecutive quarter, however, prices of maisonettes in finished form declined. Prices of villas also dropped during the quarter under review.

Data for the June quarter indicate that average residential property prices were almost unchanged on a year earlier during this period.

Box 1: BUSINESS AND CONSUMER CONFIDENCE

Business Perceptions Survey

The Central Bank of Malta's Business Perceptions Survey was recently revised to focus primarily on developments in the services sector.¹ The initial results, based on a sample of 165 firms, indicated that compared to the first quarter of 2007, on balance turnover rose significantly during the June quarter.² Selling prices increased marginally, with more than three-quarters of respondents reporting unchanged selling prices over the March quarter, while both costs and profits were higher. With regard to employment levels, on balance participants indicated that their workforce expanded.

Looking ahead, respondents were generally anticipating increased turnover and higher costs and profits during the third quarter of 2007. Selling prices were expected to increase to a lesser extent. In addition, employment levels were expected to rise.

Over the next twelve months, the majority of respondents were planning to increase their investment outlays and to add to their labour complement.

Industrial confidence

Survey results prepared for the European Commission covering manufacturing firms show that industrial confidence bounced back sharply in Malta during the first quarter, with the seasonally-unadjusted measure climbing from -15 in December 2006 to 1 in March 2007, as a result of higher order books and production expectations (see Chart 1). Stocks of finished

goods, the other component of the index, remained relatively stable during the period.

Confidence levels improved among producers of non-durable consumer goods, particularly food & beverages, but deteriorated for producers of durable goods. Increased confidence was also reported by producers of intermediate goods, reflecting improvements with respect to current order books. Similarly, the investment goods category recorded a pick-up in sentiment.

As Chart 1 shows, movements in the seasonally-adjusted measure tracked those of the unadjusted index, with the former rising by 14 percentage points to 2 in March.

Later data indicate that the seasonally-unadjusted index subsequently declined in April, but returned to positive territory in May. In contrast, the adjusted indicator shows a marginal decline in confidence in each of the two months.

¹ A description of the new survey was carried in the Central Bank of Malta *Quarterly Review* 2007:1, pages 28-30.

² Fieldwork was carried out between 22 May and 26 June 2007.

Consumer confidence

Results of surveys conducted locally for the European Commission indicate that consumer sentiment in Malta deteriorated slightly over the first quarter of 2007, with the seasonally-unadjusted index of consumer confidence falling to -28 in March from -27 in December 2006 (see Chart 2). The decline was prompted by a worsening in consumers' perceptions of employment prospects in the following twelve months and, to a lesser degree, of their own financial situation. However, this deterioration was mostly offset by an improvement in consumers' perceived ability to save during the coming twelve months, coupled with a marginal improvement in their outlook for the general economy.

In seasonally-adjusted terms consumer sentiment dipped to -29 in March 2007, 5 percentage points

below the December level.

More recent results indicate that consumer confidence picked up significantly in April and May with the seasonally-corrected and uncorrected measures of consumer confidence climbing to -19 and -13, respectively.

5. THE BALANCE OF PAYMENTS AND THE MALTESE LIRA

During the first quarter of 2007, the deficit on the current account of the balance of payments narrowed on a year earlier, entirely as a result of a decreasing merchandise trade gap. At the same time, the positive balance on the capital and financial account (excluding movements in reserve assets) contracted, as both capital inflows and those related to 'other investment' declined. Reflecting these developments, the reserve assets continued to decline.

In the foreign exchange market, the lira maintained its ERM II parity rate of Lm0.4293 against the euro throughout the first quarter. In tandem with the euro, the lira continued to appreciate against the US dollar and the Japanese yen. After having lost ground in the previous three quarters, the domestic currency also recorded gains against the British pound.

The current account

In line with seasonal patterns, the current account was in deficit in the first quarter of the year, but this narrowed by Lm11.8 million on a year earlier as a result of a marked drop in the

deficit on merchandise trade (see Table 5.1 and Chart 5.1).

Merchandise trade

Data for the first quarter of 2007 show that the merchandise trade gap declined by Lm34.9 million,

or 30.3% compared with the first quarter of 2006. Imports dropped by Lm19.7 million while exports increased by Lm15.1 million. According to Customs statistics, the fall in the trade gap in the first quarter amounted to Lm36.1 million, or 26.1% (see Table 5.2).¹

The growth in exports was accounted for mostly by higher sales of printed matter, supplemented by sales of chemicals (mainly pharmaceuticals), electrical machinery and transport equipment. Exports of mineral fuels increased from a low base, reflecting the capacity expansion of an oil bunkering facility.

The decline in imports was mainly attributed to a base effect involving the importation of an unusually large volume of machinery and sea craft in the previous year. While capital imports dropped significantly, the other categories of

¹ In the compilation of the balance of payments, customs' statistics on merchandise trade are adjusted for coverage, valuation and timing. Customs data incorporate insurance and freight costs, which are reported in the services account in the balance of payments. As a result, the figures for imports and exports of goods shown in Table 5.1 do not tally with those of Table 5.2.

imports, namely those of consumer goods, fuels and industrial supplies all increased.

The merchandise trade gap, as measured from Customs data, narrowed further in April, by Lm6.2 million, or 14.0%. A lower fuel bill led to a drop in imports which outweighed a reduction in exports that was driven by a decline in sales of machinery and transport equipment.

Services, income and transfers

During the first quarter of 2007, the positive balance on services declined by Lm4.7 million to Lm8.1 million. Higher net outflows in the other services category reflected lower receipts from trade-related services and from business, professional and technical services.² On the other hand, there was a larger surplus in the

transport component, which was mainly due to higher earnings from cargo handling services. At the same time a rise in receipts from travel reflected higher spending by inbound tourists, although this was partly offset by larger payments in connection with expenditure by Maltese residents travelling abroad.

Higher profits by non-resident owned enterprises in Malta contributed to an increase in outflows related to income. These exceeded additional investment income inflows, which were boosted by interest earnings from portfolio investment and lending to non-residents. Overall, net income outflows increased by Lm4.2 million, or 24.3%, to Lm21.2 million.

In the period reviewed, inflows from international transfers were significantly lower. The net decline

Table 5.3

% appreciation(+)/depreciation (-) of the MTL against the respective currency	0.0	1.0	1.3	0.5

¹ As from 1 April 2005, the Central Bank of Malta started to quote the Maltese lira against the euro exclusively in terms of units of Maltese lira per euro. The other currencies, i.e. the USD, the GBP and the JPY, are quoted per one Maltese lira.

² The other services category includes services imported by resident gaming firms, whose receipts from the placing of bets and outlays related to winnings are recorded in the transfers account.

of Lm14.3 million was partly attributed to the volatility of tax payments and refunds related to international trading companies operating from Malta.

The capital and financial account

The net inflow on the capital and financial account (excluding movements in reserve assets) fell by Lm24.1 million to Lm14.8 million. The positive balance on the capital account contracted substantially, mainly due to a lag in the receipt of EU funds, which were significantly lower in the first quarter this year.

At the same time, the surplus on the financial account, which is influenced considerably by the activities of the international banking sector, more than halved to Lm13.1 million (see Chart 5.2). Higher net outflows on the combined portfolio and other investment accounts, which reflected lower net inflows on the latter category, were accompanied by a lower positive balance on financial derivatives. On the other hand, net direct investment inflows were Lm3.9 million, or 6.6%, higher.

Reflecting overall movements in the balance of payments, the reserve assets continued to drop on a year-on-year basis, falling by Lm61.5 million, as against the Lm55.8 million drop recorded in the

March quarter of 2006. Errors and omissions were Lm6.7 million lower but remained negative, suggesting an underestimated current account deficit or an overestimate of the financial account surplus.

The Maltese lira

The Maltese lira remained unchanged throughout the first quarter in ERM II at the central parity rate of MTL/EUR 0.4293 (see Chart 5.3). Moving in line with the euro, the lira continued on an upward trend against the US dollar and the Japanese yen, against which it rose by 1.0% and 0.5%, respectively. Meanwhile, having depreciated against sterling in the previous three quarters, the

lira registered a gain of 1.3% against the pound during the quarter under review (see Table 5.3).

The appreciation of the lira against most major currencies continued in April, when it rose by 2.3% against the dollar, by 0.4% against the British pound and by 3.5% against the yen.

Between December 2006 and March 2007, the nominal effective exchange rate (NEER) of the

Maltese lira rose marginally, mirroring the nominal appreciation of the domestic currency against the US dollar and the yen (see Chart 5.4). But the real effective exchange rate (REER) declined by 1.0%, reflecting the fact that the lira's nominal appreciation was offset by price movements vis-à-vis Malta's trading partners and competitors. Prices in Malta, as measured by the RPI, actually fell during the period, whereas consumer prices abroad rose.

6. GOVERNMENT FINANCE¹

In the first quarter of 2007 the general government deficit contracted on a year-to-year basis as revenue grew at a faster pace than expenditure. Similarly, the deficit on the Consolidated Fund declined during the first three months of the year on account of faster revenue growth. General government debt also contracted during the year to March 2007.

General government balance²

In the March quarter of 2007, the general government deficit contracted by Lm1.0 million, or 2.5%, over a year earlier as revenue grew faster than expenditure (see Table 6.1). The former expanded by 0.7%, entirely driven by higher tax receipts. Revenue expansion was dampened, however, by a significant fall in capital and current transfers on account of lower funding received from the EU.³ Expenditure remained broadly stable over the previous year as an increase in recurrent

Source: NSO.

¹ The cut-off date for information contained in this Chapter is 10 July, 2007.

² Captures all the operations of central government, extra-budgetary units and local government on an accruals basis. In contrast, the Consolidated Fund captures most of the transactions of central government only, and on a cash basis.

³ The drop in grants reflects the changed nature of EU funds available to Malta. Prior to 2007 a regular lump-sum payment to the Government accounted for a significant element of grants received. As from this year, however, such lump-sum payments will no longer be received, and the disbursement of EU funds will be linked entirely to the completion of approved projects.

expenditure was almost matched by a drop in gross fixed capital formation. The increase in recurrent spending was fuelled by higher outlays on subsidies and on social benefits, with the former reflecting timing differences. As a result, the primary deficit, which is obtained by deducting interest payments from expenditure, contracted by 4.8% over a year earlier.

Thus, the deficit-to-GDP ratio, expressed as a moving sum over four quarters, remained stable at 2.4% during the first quarter of 2007, as both revenue and expenditure grew less rapidly than GDP. Thus, the pick-up in the deficit-to-GDP ratio in evidence during the second half of 2006 was halted (see Chart 6.1).

Consolidated Fund developments

Developments in general government revenue and expenditure broadly mirrored movements in the Consolidated Fund. In the period under review, a deficit of Lm55.7 million was registered on the Consolidated Fund, Lm5.0 million less than a year earlier (see Table 6.2). Compared with the first quarter of 2006, revenue increased at a faster pace than expenditure. The rise in the former entirely reflected higher tax receipts, while the rise in the latter was driven by increased outlays on subsidies and social security benefits. As a result, the primary deficit contracted by Lm4.4

million to Lm32.8 million.

Revenue

During the first quarter of 2007 revenue expanded by Lm9.0 million, or 5.5%, over the comparable period of the previous year (see Table 6.2). Revenue from direct taxes increased by 16.4% and contributed more than four-fifths of the rise in the total. Within this category, revenue from income tax and social security contributions rose by 28.6% and 4.0%, respectively. The rise in income tax yields was mainly attributed to differences in the timing of receipts, though lower refunds paid also contributed.

Indirect tax proceeds rose by 6.9% over a year earlier. An increase in excise duty rates on fuels in April 2006 boosted receipts from this source. Revenues from VAT and from licences, taxes and fines were also higher, rising by 5.9% and 4.4%, respectively.

In contrast, non-tax revenue declined by 13.3% entirely on account of lower grants from the EU. This drop was counterbalanced to some extent by an increase of 9.0% in Central Bank of Malta profits transferred to Government.

Expenditure

During the first three months of 2007, expenditure grew by Lm4.1 million, or 1.8%, compared to the same period of 2006. Recurrent expenditure continued to expand, though this was partly offset by lower capital outlays. The former rose by 5.5%, with programmes and other operational expenditure accounting for more than three-fifths of the increase. In turn, this reflected higher outlays on social security benefits – mostly on retirement pensions – and increased spending on medical supplies. Higher subventions to the Water Services Corporation and the Malta Shipyards also boosted recurrent expenditure compared with the same period of 2006, but this

² Includes grants but excludes proceeds from sale of assets, sinking funds of converted loans and borrowings.

³ Includes programmes & initiatives and operational & maintenance expenditure.

⁴ Revenue less expenditure excluding interest payments.

⁵ Revenue less expenditure.

Source: NSO.

was mainly due to timing differences. In contrast, spending on personal emoluments and interest payments declined marginally, with the latter reflecting lower debt levels.

Capital spending contracted by almost a quarter over the comparable period of 2006, as outlays on the new state hospital and on infrastructure projects, the latter financed by grants, fell.

More recent data, however, show that during the first five months of the year the deficit widened, as expenditure outpaced revenue, mainly on account of higher outlays on social security benefits and medical supplies.

General government debt⁴

The debt-to-GDP ratio stood at 63.4% in the first quarter of 2007, broadly unchanged from the final quarter of 2006 (see Chart 6.2).⁵

At the end of March, general government debt amounted to Lm1,406.8 million, down from Lm1,452.6 million a year earlier (see Table 6.3). In large part, the decline in debt in absolute terms was due to the impact of the privatisation of Maltacom plc in May 2006, and was mainly reflected in a drop in securities in issue. Maturing Malta Government Stocks, captured under long-term securities, were the main contributor to the decline. However, a contraction in short-term securities with an initial maturity of less than one

⁵ The GDP figure used in calculating this ratio is a four-quarter sum up to the first quarter of 2007.

year, consisting in Treasury bills, also contributed. On the other hand, the fall in loans was entirely driven by repayments of long-term foreign borrowings.

Consequently, at the end of March 2007 the share of long-term securities in the total outstanding debt stood at 79.9%. This was up

by 0.9 percentage points from a year earlier but 0.6 percentage points lower from the previous quarter. On the other hand, short-term securities totalled 12.2% of total debt, with their share rising from 11.5% at end-2006. The share of long-term loans contracted further, while the proportion of short-term loans remained broadly unchanged.

NEWS NOTES

LOCAL NEWS

Central Bank of Malta raises interest rates

On 29 May the Central Bank of Malta raised its central intervention rate by 25 basis points to 4.25%. The decision was taken against a background of narrowing interest rate differentials in favour of Maltese lira-denominated financial assets and a further reduction in the Bank's external reserves.

Convergence Reports

On 16 May the European Commission and the ECB each published a Convergence Report on Malta's application in terms of Article 122 (2) of the EU Treaty to adopt the euro on 1 January 2008. Both reports confirmed that Malta met the stipulated convergence criteria and legal requirements to participate fully in EMU and to adopt the euro.

On 20 June the European Parliament voted in favour of Malta's adoption of the euro on 1 January 2008, while on the 21 June the Council of the EU Heads of State and Government noted that Cyprus and Malta fulfilled all the convergence criteria and legal requirements to adopt the euro as their currency and called on the Ecofin Council to adopt the relevant proposals at its meeting on 10 July.

Abrogation of excessive deficit procedure for Malta

On 16 May the European Commission decided to recommend that the Ecofin Council abrogates the excessive deficit procedure against Malta as it considered that the excessive deficit situation had been corrected in a credible and sustainable way.

SmartCity agreement signed

On 23 April the Government of Malta and SmartCity (a joint venture between TECOM Investments and Sama Dubai) signed the final agreements to establish SmartCity Malta, which, with an investment outlay of USD300 million, is expected to transform the Ricasoli Industrial Estate into a state-of-the-art ICT and Media business community based on the models of Dubai Internet City and Dubai Media City.

Special Registration Scheme

On 23 April the Government launched a Currency and Bank Deposits Registration Scheme, providing individuals residing in Malta with a one-time opportunity to regularise their position in respect of holdings of eligible assets held locally where the associated income had not been declared for the purposes of the Income Tax Act. The Scheme is also designed to encourage a gradual and orderly surrender of hoarded cash ahead of the euro changeover and to facilitate its integration into the formal economy through the financial system.

Malta credit rating

Around mid-May the international credit rating agency Moody's changed its investment assessment for Malta from stable to positive. The decision was taken in the light of the positive Convergence Reports issued by the European Commission and the ECB.

Private companies' activities in the capital markets

On 16 April GAP Developments plc issued in the primary capital market Lm15 million 7% secured

bonds at par maturing in 2013. The proceeds of the issue will be utilised to part finance the development of the Fort Cambridge Area located in Tigne, Sliema. As the bond issue was oversubscribed an allocation policy was applied.

Legislation related to banking and finance

Legal Notice 93 of 2007

This legal notice lists the Deductions (Euro Related Expenditure) Rules, 2007, which are to be applied under the Income Tax Act in respect of expenditure incurred to enable the proper discharge of business in euro currency as from the date when the euro becomes legal tender.

Legal Notices 111 and 125 of 2007

Legal Notice 111 defines “eligible assets” as specified in the External Transactions Act to include deposits and currency notes denominated in both Maltese lira and euro. Legal Notice 125 further defines “eligible assets” as specified in the External Transactions Act to include securities denominated in Maltese lira and euro with a primary listing on the Malta Stock Exchange.

Legal Notices 112 and 126 of 2007

Legal Notice 112 publishes regulations providing for the establishment of a registration scheme, to be known as the Currency and Bank Deposit Registration Scheme, whereby individuals residing in Malta who hold eligible assets without declaring the relevant income (including capital gains) for the purposes of the Income Tax Act and other relevant laws, may regularise their position. The purpose of Legal Notice 126, entitled the Currency and Bank Deposits Registration Scheme (Amendment) Regulations 2007, is to rename the regulations as “Special Registration Scheme Regulations, 2007” and to redefine “eligible assets” as currency notes denominated in Maltese lira and euro, deposits denominated in

Maltese lira and euro held with credit institutions licensed under the Banking Act, and securities denominated in Maltese lira and euro with a primary listing on the Malta Stock Exchange.

Legal Notice 142 of 2007

This legal notice publishes the Insurance Business (Penalties for Offences and Infringements) (Amendments) Regulations, 2007 which came into force on 1 June 2007, listing the administrative penalties which may be imposed by the MFSA without recourse to a court hearing.

Legal Notice 143 of 2007

This legal notice publishes the Insurance Intermediaries (Penalties for Offences and Infringements) Regulations, 2007 which came into force on 1 June 2007, listing the penalties that are enforceable by prosecution in the courts of Malta as well as the administrative penalties that may be imposed by the MFSA without recourse to a court hearing.

Legal Notice 149 of 2007

This legal notice publishes the Cash Control Regulations, 2007 which establish the sum equivalent to, or in excess of, Lm4,293 in cash as the sum which any person entering or leaving Malta, or transiting through Malta, is obliged to declare to the Comptroller of Customs.

Issue of Malta Government Stock

The Government launched the following securities in the primary market:

On 13 April 2007, Lm10,000,000 5.7% Malta Government Stock 2012 (Third Issue) (Fungibility Issue) at a price of Lm105.95 per Lm100 nominal.

On 13 April 2007, Lm10,000,000 5.1% Malta Government Stock 2014 (Third Issue) (Fungibility Issue) at a price of Lm103.64 per Lm100 nominal.

On 12 June 2007, Lm15,000,000 5.7% Malta Government Stock 2012 (Third Issue) (Fungibility Issue) at a price of Lm102.75 per Lm100 nominal.

On 12 June 2007, Lm15,000,000 5.9% Malta Government Stock 2015 (Second Issue) (Fungibility Issue) at a price of Lm105 per Lm100 nominal.

On 12 June 2007, Lm10,000,000 5.2% Malta Government Stock 2020 (First Issue) at a price of Lm100 per Lm100 nominal.

On 15 June 2007 Lm4,438,400 7% Malta Government Stock 2017 (II) which were allotted to the Ecclesiastical Entities at par (in terms of the 1999 Agreement between the Holy See and Malta on the transfer of Church property).

Suspension of licence

On 25 April the MFSA announced that on 20 March it had suspended the licence of an investment services institution, Montaigne Investment (Malta) Limited, on regulatory grounds.

Surrender of licences

On 3 April the MFSA announced that Yuriplan Invest Fund SICAV plc had surrendered its collective investment scheme licence. This surrender was entirely voluntary and did not arise as a result of any regulatory action taken by the MFSA.

On 11 May the MFSA announced that MedBond Finance Limited had surrendered its Category 1 licence to undertake investment services. The surrender was entirely voluntary and did not arise as a result of any regulatory action taken by the MFSA.

INTERNATIONAL NEWS

ECOFIN Council

On 20-21 April the finance ministers of the EU Member States and their central bank governors gathered at an informal ECOFIN Council meeting in Berlin. The participants exchanged views about various aspects of public finance, the reverse-charge model as an instrument for combating VAT fraud and issues relating to financial markets.

On 8 May the Council adopted conclusions on three interlinked issues relating to financial markets. On hedge funds it acknowledged that these had contributed significantly to fostering the efficiency of the international financial system but called on creditors, investors and national authorities to remain vigilant and to adequately assess the potential systemic and operational risks that such funds presented. On asset management the Council called on the European Commission to present a proposal for the revision of the directive on UCITS (undertakings for collective investment in transferable securities) so as to cater for the growth of the investment industry and to enhance its potential for growth. On ageing, the Council called on the Member States to work for increased participation and contribution levels of households in non-statutory pension schemes and asked the Commission to commence work on the development of a single market for retirement products.

On 5 June the Council adopted decisions closing the excessive deficit procedures it had opened in 2003 and 2004 against Germany, Greece and Malta after these countries had succeeded in reducing their government deficits below the 3% of gross domestic product (GDP) threshold set by the EU's Stability and Growth Pact.

The Council also adopted conclusions on tax fraud and on a package of measures aimed at simplifying VAT arrangements for business.

The Council also assessed the progress made by Cyprus and Malta in fulfilment of the convergence criteria with a view to allowing them to adopt the euro as their currency on 1 January 2008.

G7 Finance Ministers meeting

In mid-April the G7 Finance Ministers and central bankers met in Washington DC before the IMF and World Bank spring meetings. They noted that although risks remained, the global economy was having its strongest sustained growth in more than thirty years and was becoming more balanced. They cited high and volatile fuel prices, increased protectionist measures and the vulnerability of global financial markets as the main risks. The G7 ministers remained divided on a proposal to regulate the trillion-dollar hedge fund industry. Over the past year, international concern has grown over the level of risk investors are exposed to by these lightly-regulated investment schemes. However, both the US and the IMF resisted calls for tighter regulation of the sector, claiming that market forces were sufficient to control it.

G8 Finance Ministers' meeting

On 19 May the G8 Finance Ministers met in Potsdam, Germany to discuss global economic issues in preparation for the Summit of the G8 Heads of State and Government in Heiligendamm in June. They noted that global growth remained robust and was more balanced across regions and within their countries. They supported efforts to ensure a successful outcome of the Doha Development Round and initiatives to enhance the effectiveness and efficiency of public financial management in Africa. The participants also discussed measures to improve the efficiency of public spending and the

promotion of energy diversification so as to ensure energy security.

EBRD annual meeting

On 20 and 21 May the EBRD held its Annual Meeting and Business Forum of the Board of Governors in Kazan, Republic of Tatarstan, Russian Federation. The discussions mainly highlighted four topics. These were the EBRD's mission, income allocation, the way the Bank operates and co-operation.

With regard to allocation of income, there was a strong and overwhelming majority in favour of the allocation of income for 2006 to the reserves of the EBRD in a context in which, moving east and south-east, the Bank was taking more risks. There was a debate about the future of income allocation, however, with the main view favouring a mission-based allocation. There was also debate over whether a dividend should be distributed.

IMF and World Bank spring meetings

On 14 April the International Monetary and Financial Committee of the IMF met in Washington DC and welcomed the continued strong, broad-based expansion of the global economy. However, downside risks requiring continued vigilance arose from the possibility of a reassessment of risks in global financial market conditions, a sharper-than-expected slowdown in the U.S. economy and the revival of inflationary pressures as output gaps closed or if oil prices rebounded. The Committee welcomed the resumption of the Doha Round trade negotiation, and called on WTO members to work with renewed commitment to urgently achieve an ambitious outcome. They welcomed the steps being taken to strengthen and modernise IMF surveillance so as to ensure its effectiveness as globalization deepened.

On 15 April the Development Committee of the IMF and the World Bank, also meeting in Washington DC, welcomed the progress being made in reducing income poverty, reflecting both the continued growth of the global economy and the impact of improved country policies and institutions. However, progress towards the Millennium Development Goals (MDGs) had been uneven across countries and sectors. The Committee welcomed new and emerging public and private sources of aid that brought more resources to help poor countries reach their MDGs. They reviewed the implementation of the Africa Action Plan and the proposed revisions to the Plan.

G8 Summit 2007

Between 6 and 8 June the Group of Eight leading

industrialised nations met in Heiligendamm, Germany. They discussed topics related to growth and responsibility in the world economy, particularly in Africa. They committed themselves to a G8 Agenda for Global Growth and Stability with the aim of pursuing their strategies to promote a smooth adjustment of global imbalances. They also noted the positive contribution of hedge funds to financial-market stability but urged that systemic risks be minimised by increasing transparency and market discipline. Other items that were discussed included climate change, energy efficiency and energy security, responsibility for raw materials, transparency and sustainable growth, as well as the need for achieving an ambitious, balanced and comprehensive agreement on the Doha Development Agenda.

STATISTICAL TABLES

¹ Splits between public and private sector are only indicated where the public sector has a significant role in that economic activity.

² Excluding loans to unincorporated bodies such as partnerships, sole proprietors and non-profit institutions. Loans to such bodies are classified by their main activity.

³ Includes loans to agriculture & fishing, mining & quarrying, public administration, education, health & social work, financial intermediation, community, recreational & personal service activities and to extra-territorial bodies & organisations.

⁴ Total public sector loans shown in this column do not add up to the public sector borrowing by economic activity since loans to the public sector are only indicated where it is deemed that the sector has a significant role in that economic activity.

¹ The investment funds sector comprises resident collective investment schemes. Figures for professional investor funds are excluded. As from 2006, data for those collective investment schemes with a net asset value of less than 2% of the total assets of the sector are estimated.

² Includes loans, creditors, accruals, shareholders' units/ funds and other liabilities to non-resident counterparties.

³ Includes creditors, accruals and other liabilities.

⁴ Includes deposits, securities other than shares, shares and other equity, debtors and other assets with non-resident counterparties.

⁵ Includes debtors, currency (both Maltese lira and foreign), prepayments and other assets.

¹ The Central Bank of Malta injects liquidity into the banking system through an auction of reverse repos in the event of a liquidity shortage. With effect from 15th September 2005, the maturity period of reverse repos is 7 days.

² The Central Bank of Malta provides a marginal lending facility to credit institutions in order to satisfy their liquidity needs arising from normal banking business.

³ The Central Bank of Malta accepts placements of term deposits by credit institutions, through auctions, in order to absorb excess liquidity from the banking system. Up to 14th September 2005 the maturity period of such deposits was 14 days. Thereafter the maturity period was reduced to 7 days.

⁴ The Central Bank of Malta provides an overnight deposit facility to credit institutions to absorb temporary liquidity excesses that could not be taken up by the market.

¹ Amounts are at nominal prices.

² Coupons are reviewable every 2 years and will be set one percentage point less than the normal maximum lending rate allowed at law subject to a minimum of 7%. Redemption proceeds are payable at Lm110 per Lm100 nominal.

³ Fungible issue. That is, the Accountant General reserves the right to issue, in future, additional amounts of the present stock. In the event of such future issues, these would be amalgamated with the existing stock.

Note: N/A implies rates not quoted as the stock is close to maturity.

			2006	703.88	2.77

¹ The Index of Inflation (1946 = 100) is compiled by the NSO on the basis of the Retail Price Index in terms of Article 13 of the Housing (Decontrol) Ordinance, Cap. 158.

² Following the revision of utility rates in November 1998, the index and the rate of inflation for the year 1997 were revised to 567.08 and 3.11% respectively. Consequently, the rate of inflation for 1998 would stand at 2.39%.

GENERAL NOTES

PART 1 MONETARY, BANKING, FINANCIAL MARKETS AND INVESTMENT FUNDS

Institutional balance sheets

The balance sheets published in Tables 1.1 and 1.2 are based on accounting principles. Consequently, the data in these tables might differ from those shown in other tables compiled according to statistical concepts and methodologies.

General monetary statistical standards

Since October 2003, the compilation of monetary statistics has been consistent with internationally agreed statistical concepts and methodologies as set out in the IMF's *Monetary and Financial Statistics Manual* (2000), ECB Regulation 2001/13 concerning the consolidated balance sheet of the monetary financial institutions (MFI) sector and the European System of Accounts (ESA 1995). Prior to October 2003, the compilation of monetary statistics was broadly in line with the IMF's *A Guide to Money and Banking Statistics in International Financial Statistics* of December 1984.

Determination of 'residence'

Monetary data are based on the classification of transactions by the residence of the transactor, who may either be a resident or a non-resident of Malta. A transactor is an economic entity that is capable in its own right of owning assets, incurring liabilities and engaging in economic activities with other entities. The internationally agreed residence criterion for the purposes of statistical compilation is based on the transactor's 'centre of economic interest'.

The term 'centre of economic interest' indicates that there exists some location within the economic territory on or from which a unit engages, and intends to continue to engage, in economic activities and transactions on a significant scale, either indefinitely or over a finite but long period of time (a year or more). Those companies solely undertaking international business activities, including shipping activities, which have a physical presence and undertake a significant degree of economic activity in Malta, are considered resident units.

Transactors not meeting the above-mentioned criteria, that is, units that have their 'centre of economic interest' in other countries, are considered to be non-residents. Hence, diplomatic bodies, embassies, consulates and other entities of a foreign government located in Malta are considered to be residents of the country they represent and not of Malta.

Sector classification of the Maltese economy

The main sectors of the Maltese economy, for statistical reporting purposes, are currently subdivided by their primary activity into:

- (a) Monetary financial institutions (MFIs)
- (b) Other financial intermediaries and financial auxiliaries
- (c) Insurance companies and pension funds
- (d) General government
- (e) Non-financial companies
- (f) Households and non-profit institutions (NPISH)

In addition to the above, there are those transactors that are considered to be non-residents (also referred to as the ‘external sector’ or the ‘rest of the world’).

- (a) **Monetary financial institutions (MFIs)** consist of:

- i. The **central bank**, which is the national financial institution that exercises control over key aspects of the financial system and whose principal function is to issue currency, to maintain the internal and external value of the currency and to hold all or part of the international reserves of the country.

- ii. **Other monetary financial institutions (OMFIs)**, which in Malta consist almost entirely of credit institutions. The business of OMFIs is to receive deposits and/or close substitutes for deposits from entities other than MFIs and, for their own account (at least in economic terms), to grant credits and/or make investments in securities. Credit institutions licensed in Malta comprise banks licensed by the competent authority under the Banking Act (Cap. 371). In accordance with the Banking Co-ordination Directives of December 1977 and December 1989 (77/780/EEC and 89/646/EEC), a credit institution is “an undertaking whose business is to receive deposits or other repayable funds from the public - including the proceeds arising from the sales of bank bonds to the public - and to grant credit for its own account”.

- (b) **Other financial intermediaries and financial auxiliaries:**

Other financial intermediaries are non-monetary financial companies (excluding insurance companies and pension funds) principally engaged in financial intermediation by incurring liabilities in forms other than currency, deposits and/or close substitutes for deposits from institutional units other than MFIs. The principal activities of these institutions may include one or more of the following: long-term financing, financial leasing, factoring, security and derivative dealing, receiving deposits and/or close substitutes for deposits from MFIs only, and managing investment trusts, unit trusts and other collective investment schemes.

Financial auxiliaries are companies that are principally engaged in auxiliary financial activities, that is, activities closely related to financial intermediation, but which are not financial intermediaries themselves. The following are examples of companies classified in this sector: insurance, loan and securities brokers, investment advisers, flotation companies that manage issues of securities, central supervisory authorities of financial intermediaries and financial markets when these are separate institutional units, managers of pension funds and mutual funds and companies providing stock exchange and insurance exchange services.

(c) **Insurance companies and pension funds:**

This sector comprises non-monetary financial companies principally engaged in financial intermediation as the consequence of the pooling of risks. Insurance companies consist of incorporated mutual and other entities whose principal function is to provide life, accident, health, fire or other forms of insurance to individual institutional units or groups of units.

Pension funds included in this sector are those that are constituted as separate from the units that created them. They are established for the purpose of providing retirement benefits for specific groups of employees. They have their own assets and liabilities, and they engage in financial transactions on their own account. These funds are organised and directed by individual private or government employers, or jointly by individual employers and their employees, and towards which the employees and/or employers make regular contributions.

(d) **General government:**

General government includes all institutional units principally engaged in the production of non-market goods and services intended for individual and collective consumption and/or in the redistribution of national income and wealth. This is sub-divided into:

i. **Central government**, which includes all administrative departments of the state and other central agencies whose competence extends over the whole economic territory. Central government thus includes departments, ministries, and offices of government located in the country together with embassies, consulates, military establishments and other institutions of government located outside the country. Also included in the central government sector are extra-budgetary units, also termed public non-market units. These comprise institutional units under public control that are principally engaged in the production of goods and services not usually sold on a market and/or that are involved in the redistribution of national income and wealth. These units/entities do not charge “economically significant” prices and/or did not cover at least 50% of their production costs in sales over the last years.

ii. **Other general government**, which in Malta comprises solely the local government sector. Local government includes administrative departments, councils or agencies whose competence covers only a restricted part of the economic territory of the country.

The **Public Sector** comprises the general government sector and public companies, the latter being those companies that are owned by government or are subject to government control.

(e) **Non-financial companies:**

This sector comprises companies not engaged in any form of financial intermediation but engaged principally in the production of market goods and non-financial services. Included in this sector are market-producing co-operatives, partnerships and sole proprietorships recognised as independent legal entities, which are subdivided into:

i. **Public non-financial companies**, i.e. companies that are subject to control by government units.

Control over a company is defined as the ability to determine general corporate policy by choosing appropriate directors or by owning more than half of the voting shares or otherwise controlling more than half of the shareholders' voting power. In addition, the government may secure control over a company or corporation by a special decree or regulation that enables it to determine corporate policy or to appoint the directors. These state-owned non-financial companies are to be distinguished from the extra-budgetary units included in the general government sector, since they are considered to be producing goods and services to the market, and/or to be charging economically-significant prices, and/or more than 50% of their production costs are covered by their sales.

ii. **Private non-financial companies**, i.e. companies that are controlled by non-government units, whether resident or non-resident.

(f) **Households and non-profit institutions serving households (NPISH):**

This sector comprises individuals or groups of individuals that are consumers and producers of goods and non-financial services exclusively intended for their own final consumption. It includes non-profit institutions serving households principally engaged in the production of non-market goods and services intended for particular sections of households and market-producing co-operatives, partnerships and sole proprietorships that are not recognised as independent legal entities.

Classification of economic activities

The classification of economic activities follows the standards of Regulation (EEC) No 3037/90 entitled "Nomenclature générale des activités économiques dans les Communautés européennes" (General industrial classification of economic activities within the European Communities), known by the acronym NACE Rev.1.

Measures of money

The Bank compiles data on three main monetary aggregates: narrow money (M1), intermediate money (M2) and broad money (M3).

Narrow money (M1) includes the most liquid components of M3, namely currency in circulation, demand deposits and savings deposits withdrawable on demand. Excluded from demand deposits are uncleared effects drawn on OMFIs and cheques and other items in the process of collection, but non-government deposits with the Central Bank of Malta are included.

Intermediate money (M2) comprises M1, residents' savings deposits redeemable at notice and time deposits with an agreed maturity of up to and including two years.

Broad money (M3) comprises M2 and the OMFIs' repurchase agreements with the non-bank sector and OMFIs' debt securities issued with an agreed maturity of up to and including two years. It therefore includes the resident non-bank sector's holdings of bank notes and coins in circulation, resident non-bank and non-government deposits irrespective of denomination, the OMFIs' repurchase agreements

with the non-bank sector and the banks' issues of debt securities, all with an agreed maturity of up to and including two years.

The Monetary Base

The monetary base (M0) is defined as currency in issue together with the OMFIs' deposits with the Central Bank of Malta. Currency in issue comprises both currency in circulation and holdings of national currency by the banks. OMFIs' deposits with the Central Bank of Malta exclude term deposits and other bank deposits that are restricted for a significant period of time.

Compilation and valuation principles

Monetary statistics are based on a consolidation of the monthly financial statements provided by the local OMFIs and the Central Bank of Malta. The OMFIs must submit data to the Central Bank not later than twelve calendar days following the end of the reporting month or quarter. Branches and subsidiaries of OMFIs operating in Malta but whose head offices/parent companies are located abroad are also obliged to submit similar data. The reporting institutions compile monthly financial information in line with international accounting norms as established by the International Accounting Standards Committee. In addition, in certain instances, the OMFIs are required to submit returns in accordance with specific statistical requirements as instructed by the Central Bank.

Monetary data show stock positions, which are outstanding balances as at the end of the reference period. Monetary aggregates are consolidated for the MFI sector, so that all identifiable interbank transactions are eliminated. Assets and liabilities are generally reported at market or fair value and on an accruals basis. Thus, the effects of transactions and other events are recognised when they occur rather than when cash is received or paid. Transactions are recorded at the time of change in ownership of a financial asset. Within this context, change in ownership is accomplished when all rights, obligations and risks are discharged by one party and assumed by another. Instruments are reported in accordance with their maturity at issue, that is, by original maturity. Original maturity refers to the fixed period of life of a financial instrument before which it cannot be redeemed.

All financial assets and liabilities are reported on a gross basis. Loans - which include overdrafts, bills discounted and any other facility whereby funds are lent - are reported at their book value and gross of all related provisions, both general and specific. Financial assets and liabilities that have demonstrable value - as well as non-financial assets - are considered as on balance sheet items. Other financial instruments which are conditional on the occurrence of uncertain future events, such as contingent instruments, are not given on balance sheet recognition. Only the gains and losses on the latter instruments are treated as on balance sheet items.

Release of monetary statistics

Monthly provisional consolidated monetary statistics are posted on the Central Bank of Malta's website generally by the end of the month following the reference month. Such monetary statistics are considered provisional since the Central Bank may need to revise the data referring to the periods prior to the current reference period arising from, for example, reclassifications or improved reporting procedures. Subsequently, such provisional monetary data, together with related analytical information,

are released to the press through the Bank's monthly '*Statistical Release on Monetary Aggregates and their Counterparts*' and, in more detail, in the Central Bank of Malta's *Quarterly Review* and *Annual Report*. The statistics released in the *Quarterly Review* and *Annual Report* are generally considered to be final. Major revisions to the data are also highlighted by means of footnotes in these publications. When major revisions to the compilation methodology are carried out, the Bank releases advance notices in its official publications.

Financial market indicators

The statutory interest rates used by the Central Bank of Malta and other indicative benchmark money market rates are given as end-of-period rates as a percentage per annum. The repurchase agreement/term deposit rates are the prevailing rates actually dealt in at the end of the month or the rates offered by the Central Bank of Malta. The interbank market offered rates shown are the prevailing rates of the last dealings between banks in the official interbank market during the last month of the period reported. When no deals are transacted, the Central Bank of Malta fixing rate average is used.

The weighted average deposit rates on current, savings and time deposits refer to the interest rates applicable on resident Maltese lira deposits only. These rates are calculated by multiplying each amount by the different rates on each type of deposit and dividing by the total amount of each type of deposit. The weighted average rate on time deposits is calculated on all time deposits. The weighted average lending rate is calculated by multiplying the amount of each loan extended to residents in local currency by the interest rate applied thereto and dividing by the total amount.

The primary market Treasury bill rates are the weighted averages of the rates attached to the bills that are taken up by bidders at the weekly auction. Treasury bills are classified by original maturity. A "-" sign implies that no transactions occurred during the reference period. Meanwhile, the secondary market yields represent the wholesale selling rates quoted by the Central Bank of Malta at the end of the reference period for amounts of Lm50,000 or over in each respective tenor. Interest rates on Malta Government long-term debt securities represent average International Securities Market Association (ISMA) redemption yields on applicable stocks with the periods specified referring to the remaining term to maturity. ISMA yields are quoted on the basis of an annual compounding period, irrespective of how many coupon periods per annum the stock has.

The Malta Stock Exchange (MSE) share index is calculated real-time during each trading day. It is based on the last closing trade prices of the shares of all eligible companies and weighted by their current market capitalisation. The index has a base of 1,000 initiating on 27 December 1995.

Investment funds

The investment funds sector consists of the collective investments schemes licensed by the MFSA that have a centre of economic interest in Malta, other than professional investor funds and money market funds. The balance sheet is aggregated and therefore includes, among the assets and liabilities, holdings by investment funds of shares/units issued by other investment funds.

PART 2 GOVERNMENT FINANCE

Tables in this section show the general government fiscal position compiled on the basis of ESA 95 methodology. The data are consolidated between the sectors of government. The sources for such data are the NSO and Eurostat. Government expenditure classified by function is based on the OECD's Classification of the Functions of Government (COFOG), which is a classification of the functions, or socio-economic objectives, that the general government sector aims to achieve through various outlays. The table showing the general government deficit-debt adjustment (DDA) shows how the general government deficit is financed and considers the relationship between the deficit and Maastricht debt. The DDA thus reconciles the deficit over a given period with the change in Maastricht debt between the beginning and the end of that period. It is mainly explained by government transactions in financial assets, such as through privatization receipts or the utilization of its deposit accounts, and by valuation effects on debt.

The general government debt is defined as the total gross debt at nominal value outstanding at the end of a period and consolidated between and within the various sections of the government. Also shown are data on debt guaranteed by the government, which mainly relate to the non-financial public sector companies. Government guaranteed debt excludes guarantees on the MIGA and IBRD positions and government guarantees on foreign loans taken by the Central Bank of Malta on behalf of government - which loans already feature in the calculation of government external debt. They also include guarantees on loans granted by the extra-budgetary units but exclude guarantees granted to them by government as these already feature as general government debt.

The methodology underlying the compilation of data on the external loans of general government is generally consistent with the standards of the World Bank's Debtor Reporting System (DRS). Data refer to external loans with an original maturity of one year and over. Debt is recognised when disbursement of funds is effected. Data are converted to Maltese liri using end-of-period exchange rates.

PART 3 EXCHANGE RATES, EXTERNAL TRANSACTIONS AND POSITIONS

Exchange rates statistics show the end-of-period and average exchange rates of the Maltese lira against other currencies. The Maltese lira average exchange rates are calculated on the arithmetic mean of the daily opening and closing Central Bank of Malta middle rates.

The concepts and definitions used in the compilation of balance of payments and international investment position (IIP) statistics are generally in line with the IMF Balance of Payments Manual (BPM05). The conventions of the system are also in line with the IMF manual. Credit entries are recorded for e.g. exports, income receivable and financial items, reflecting reductions in the economy's foreign assets or increases in its foreign liabilities. Conversely, debit entries are recorded for e.g. imports, income payable and financial items, reflecting increases in assets or decreases in liabilities. The concepts of economic territory, residence, valuation and time of recording are broadly identical to those used in the compilation of monetary statistics. The IIP statistics are based on positions vis-à-vis non-residents of Malta and are, in most cases, valued at current market prices.

The official reserve assets concept is also in line with the IMF's Balance of Payments Manual (BPM05). Official reserve assets refer to the country's international reserves, which are those external assets that are readily available to, and controlled by, the monetary authorities for direct financing of payments imbalances, for indirectly regulating the magnitudes of such imbalances through intervention in exchange markets to affect the currency exchange rate, and/or for other purposes.

PART 4 REAL ECONOMY

National accounts and other general economic statistics are mostly produced by the NSO in accordance with ESA 95 standards except for the labour market indicators, which are based on the ETC's administrative records, and the RPI. Data on development permits are sourced from the Malta Environment and Planning Authority (MEPA).

Labour market statistics comprise those compiled on the basis of the NSO's Labour Force Survey (LFS) and the ETC's administrative records. The LFS is based on a random sample of private households using concepts and definitions outlined by Eurostat according to methodologies established by the International Labour Organisation (ILO). As from March 2004, data are based on a weekly survey carried out throughout the reference quarter, whereas from June 2005 data are weighted using a new procedure and are, thus, not strictly comparable with figures prior to this period. The labour market data based on the administrative records of the ETC represent a measure of the gainfully occupied population using information obtained from the engagement and termination forms filed with the ETC itself. ETC data on unemployment are based on the number of persons registering for work under Part 1 and Part 2 of the unemployment register.

The RPI covers all monetary consumption expenditure incurred by Maltese residents weighted according to the spending pattern derived from the Household Budgetary Survey 2000/1. On the other hand, the HICP covers all household final consumption expenditure irrespective of nationality or residence status. Consequently, the HICP uses weights that cover not only private and institutional household expenditure but also tourism expenditure in Malta. The differences in these weighting schemes account significantly for the monthly disparities in the RPI and the HICP.

The sources of data used in the compilation of the Central Bank's property prices index are the properties advertised for sale in all localities in Malta and Gozo in the property section of a local Sunday newspaper. Data for a particular quarter are derived from the newspapers published on the first Sunday of each month within the quarter. The property types include flats and maisonettes, both in shell and in finished form, together with terraced houses, townhouses, houses of character and villas. Indices for each property type are derived on the basis of median prices weighted by the number of observations in each property category. The overall index is a Fischer chained index, calculated as the square root of the product of the chained Laspeyres and the chained Paasche indices. Annual data are derived as an average of the quarterly indices. Prices of commercial properties are excluded from the index.
